

Dear Radboudumc,

My name is Varvara Lazarenko, and I would like to express my interest in applying for a PhD position in Sustainable Healthcare.

From the moment I discovered this position, I felt it aligned perfectly with my career aspirations to address the environmental and societal issues of the healthcare system. As a recent graduate of the Medical Biology master's program with a specialization in Science, Management & Innovation (SMI) from Radboud University, I am passionate about making healthcare more environmentally sustainable and cost-effective, ultimately benefiting patients, medical professionals, and society. That is why performing the environmental analysis of care pathways presents a great interest to me.

My academic background equips me with a solid foundation for this role. Having finished a bachelor's in Biology and a master's in Medical Biology, I gained extensive knowledge in the field and developed a critical understanding of various medical technologies and biomedical challenges. During the SMI track in the second year of my master's, I gained valuable insights into the sustainability goals, health economics, health technology assessment (HTA), and life cycle assessment (LCA) through courses such as Future of Health, Methods of Societal Research, Sustainable Innovation Management, and How Health Systems Work.

In addition to my academic qualifications, my professional experience will be an asset for the PhD position in Sustainable Healthcare. As a Junior Research Assistant at the Faculty of Biology and an assistant at a Contract Research Organization, I gained substantial experience in writing academic papers, designing experiments, and preparing clinical documentation. This role deepened my understanding of the scientific landscape, as well as the healthcare and pharmaceutical industries. My master's thesis at HAN University of Applied Sciences focused on the added value of home telemonitoring technology. It involved conducting an extensive literature review, as well as surveys and interviews with patients and medical professionals, culminating in a cost-effectiveness analysis, which provided me with valuable experience in HTA. Furthermore, during my SMI track, I had the opportunity to work on real-world projects such as "A Circular Alternative to Single-Use Cups Within the Dutch Train System" and "A Shared Ownership Model of the Green Corridor." These experiences significantly enhanced my knowledge of environmental assessments.

To sum up, I believe that my strong motivation for sustainability research within healthcare field, combined with my comprehensive education and diverse professional experiences, positions me as a strong candidate for the PhD position in Sustainable Healthcare. Analyzing the environmental impact of the clinical pathways will bring me closer to my final academic and career goals – towards the future of an expert in connecting science and society in a sustainable way.

Thank you for considering my application and, in case any questions arise, please do not hesitate to contact me.

Kind regards,
Varvara Lazarenko
