

Dear prof. dr. Saskia de Wildt and dr. Rick Greupink,

My name is Varvara Lazarenko, and I would like to express my interest in applying for the position of Science Communication Specialist 'Global Health and PBPK Modeling' at the department of Pharmacy, Pharmacology and Toxicology at Radboudumc.

From the moment I discovered this position, I felt it aligned perfectly with my career aspirations and my decision to focus on the societal aspects of life sciences. I am a recent graduate of the Medical Biology master's program with a specialization in Science, Management & Innovation (SMI) from Radboud University. I am passionate about improving healthcare and patient experience through sustainable innovations and initiatives that effectively meet the needs of patients and medical professionals. That is why I am thrilled about this opportunity to create and disseminate awareness on the dosing guidelines during pregnancies within the MADAM project, contributing to a healthier future for society.

My academic background equips me with a solid foundation for this role. Having finished a bachelor's in Biology and a master's in Medical Biology, I gained extensive knowledge in the field and developed a critical understanding of various medical technologies and pharmaceuticals, including pharmacokinetics and pharmacology. During the SMI track in the second year of my master's, I gained valuable insights into digital healthcare, health technology assessment (HTA), market research, business models, value propositions, and health economics, covering healthcare systems of different countries such as the Netherlands, the US, the UK, Germany, etc.

In addition to my academic qualifications, my professional experience will be an asset in the role of Science Communication Specialist. As an assistant at a Contract Research Organization, I developed clinical trial documentation, conducted pharmaceutical user interviews, and ensured compliance with client requirements across different projects. This experience provided me with a deep understanding of the MedTech and pharmaceutical industries, as well as improved my managerial and interpersonal skills. Furthermore, during my SMI track, I collaborated with fellow students and organizations in Nijmegen (including the municipality of Nijmegen) on real-life projects such as "HTA of a Medical Guidance App for International Students in the NL" and "A Shared Ownership Model of the Green Corridor." My master's thesis at HAN University of Applied Sciences on the added value of home telemonitoring technology enriched my experience in HTA and stakeholder collaboration even further.

In summary, my strong motivation for connecting science and society, combined with my comprehensive education and diverse professional experiences, positions me as a strong candidate for the Science Communication Specialist role.

I would like to inform you that I hold Russian nationality; however, my orientation year visa would allow me to work in the Netherlands without any restrictions until November 4, 2025. After this date, I will require a work permit to continue my employment.

Thank you for considering my application. Please feel free to reach out if you have any questions.

Warm regards,
Varvara Lazarenko
