

Dear Ms. Rosendo and Selection Committee,

I am writing to express my strong interest in the Technician Operations (Production) position at GenDx. The opportunity to contribute to the manufacturing of high-quality transplant diagnostics products strongly resonates with both my professional background and personal motivation. I greatly value research and diagnostics that have a direct impact on patients' lives, and I would be proud to support GenDx's mission of improving transplant outcomes worldwide.

I hold a BSc in Biology and an MSc in Medical Biology, which provided me with a broad foundation in molecular biology, cell biology, and physiology. Over the past two years, I have gained extensive hands-on experience working both in academic laboratories and in a Contract Research Organization (CRO). As a Junior Research Assistant at Lomonosov Moscow State University, I planned and executed complex experiments involving RNA/DNA extraction, PCR/qPCR, western blotting, and immunohistochemistry, while also performing statistical analyses and reporting results. Later, during my MSc studies, I further strengthened my molecular expertise through advanced projects in imaging, cloning, and cell and tissue culture. At the CRO, I broadened my perspective by supporting clinical trials, preparing documentation, and ensuring compliance with regulatory frameworks – experience that trained me to be precise, reliable, and committed to high-quality standards.

These experiences have made me skilled in routine molecular techniques such as PCR/qPCR, aliquoting, reagent preparation, and buffer production, all of which are central to this position. They also gave me a deep appreciation for teamwork and the importance of clear documentation under regulated conditions. I thrive in collaborative environments, enjoy supporting colleagues, and am motivated to contribute to the continuous improvement of laboratory processes.

What excites me most about this role at GenDx is the chance to apply my technical expertise in a production setting where precision and quality directly translate into patient benefit. I am eager to contribute to reagent preparation, product assembly, and equipment maintenance, while also supporting the implementation of new products and protocols. I value the international and innovative character of GenDx, and I am motivated to grow as a professional while contributing to your team's success.

Thank you for considering my application. I would be delighted to bring my molecular biology background, professional lab experience, and strong sense of responsibility to GenDx and to support your mission in transplant diagnostics.

Warm regards,
Varvara Lazarenko
