

Dear Valcon Hiring Team,

I am writing to express my enthusiasm for the Junior Consultant (Technology) position at Valcon. With a Master's degree in Medical Biology and a strong interest in data-driven problem solving, I am eager to apply my analytical skills, technical mindset, and collaborative spirit to contribute to impactful projects at the intersection of strategy, technology, and data.

During my research internship at the Donders Institute for Brain, Cognition and Behaviour, I worked on a project analyzing neuronal activity data using Python. This experience taught me how to translate complex scientific questions into structured, technical solutions – processing raw datasets, visualizing patterns in neuronal responses, and drawing conclusions from large volumes of time-series data. It sparked my interest in applying analytical thinking and coding skills beyond the academic environment, in a setting where innovation directly drives business value.

My professional experience will be a significant advantage for working at the company. In my previous roles as a Junior Research Assistant and later as a Clinical Research Organization Assistant, I contributed to multidisciplinary projects that required data-driven analysis, stakeholder coordination, and strategic thinking. These experiences taught me how to break down complex problems, manage ambiguity, and deliver practical solutions. Later, through my master's thesis on the added value of home telemonitoring technology, I got the experience working with elderly patients and medical professionals, providing me with skills in stakeholder communication, innovation strategy, and regulatory awareness – competencies essential for a consultant.

What excites me about Valcon is your dynamic and cross-functional approach, where teams collaborate to bring tangible results to clients across sectors. I am particularly motivated by the opportunity to learn through the Technology Bootcamp and contribute to real-world challenges using modern tools such as Mendix and Azure, while continuously developing my capabilities with the support of experienced mentors.

I bring to the table strong communication skills, a critical mindset, and the drive to learn and grow within a team that values curiosity and integrity. I am excited about the prospect of working in a high-impact environment where analytical rigour and creative solutions go hand in hand.

Thank you for considering my application. I would be thrilled to further discuss how my background and motivation align with Valcon's mission and the Junior Consultant role.

Warm regards,
Varvara Lazarenko
