

Dear GenScript Hiring Team,

I am writing to express my interest in the position of Technical Account Manager in Molecular Biology at GenScript Europe. With a Master's degree in Medical Biology from Radboud University and a specialization in Science, Management and Innovation (SMI), I bring practical experience in research and industry. I am committed to improving the world through modern digital technology and sustainable, innovative solutions. That is why I am excited to apply my interdisciplinary background and customer-oriented mindset to advancing health through biotechnology at GenScript.

My academic background equips me with a solid foundation for this role. Having finished a bachelor's in Biology and a master's in Medical Biology, I have developed a strong foundation in life sciences — from cellular biology and molecular mechanisms (both theoretical and practical experiences) to health technology assessment (HTA) and market-driven innovation. During my Master's, I worked on real-world projects such as the HTA of a medical app and the development of a shared ownership model of Green Corridor in Nijmegen, where I practiced stakeholder engagement, scientific communication, and solution-oriented project delivery. These experiences sharpened my ability to understand complex scientific problems and translate them into actionable, value-driven solutions.

Professionally, I have worked in both academic and industry settings. As a Junior Research Assistant at Faculty of Biology, I contributed to the research of the physiological and molecular mechanisms of action of potassium TASK-1 channels in rat arteries amid pH changes. This experience strengthened my expertise in wet lab techniques, while also enhancing my project management and presentation skills. At a Contract Research Organization, I assisted in the design and documentation of clinical trials, conducted user interviews, and analyzed different data. My most recent internship on the added value of innovations involved extensive contact with hospitals and medical professionals, cost-effectiveness modelling, and transforming scientific evidence into insights for healthcare decision-making. This blend of technical knowledge and communication skills helps me to act as a bridge between scientific teams and clients — exactly the kind of interaction I am excited to continue at GenScript.

Beyond academics and work, I have consistently developed my interpersonal and organizational abilities through extracurricular activities. I frequently served as a mentor for first-year students, and later, I organized volleyball tournaments for an international group at Radboud campus, which enhanced my teamwork, leadership, and communication skills. Moreover, my ongoing efforts to improve my Dutch fluency reflect my commitment to fully integrate into the professional environment in the Netherlands.

In summary, my strong motivation, comprehensive education and diverse professional experiences position me as a strong candidate for the role of Technical Account Manager. I'm excited to support clients in advancing their biotechnology projects with high-quality, science-driven solutions.

Thank you for considering my application. Please feel free to reach out if you have any questions.

Warm regards,
Varvara Lazarenko
