

Dear Synthon,

My name is Varvara Lazarenko, and I would like to express my great interest in becoming a part of the company.

I am a 2024 graduate of the Medical Biology master's program with a specialization in Science, Management & Innovation (SMI) from Radboud University. I am passionate about improving healthcare & science systems through sustainable innovations and cutting-edge solutions. That is why I see myself shining in such roles as clinical research associate, clinical coordinator, communication specialist, consultant, or scientist. I thrive in a fast-paced environment where I can interact with different healthcare stakeholders like hospitals, insurance companies, and healthcare professionals and work on clinical trial research, contributing to a healthier future for society.

My academic background equips me with a solid foundation for these roles. Having finished a bachelor's in Biology and a master's in Medical Biology, I gained extensive knowledge in the field and developed a critical understanding of different medical technologies, pharmaceuticals, and biomedical challenges. During the SMI track in the second year of my master's, I gained valuable insights into digital healthcare, health technology assessment (HTA), market research, business models, value propositions, and health economics. Due to this, I have a clear understanding of how technology can drive business success.

In addition to my academic qualifications, my professional experience will be a significant advantage for working at Synthon. As a Junior Research Assistant at the Faculty of Biology and an assistant at a Contract Research Organization, I gained substantial experience in writing academic papers, designing experiments, preparing clinical documentation for the phase I, II, and III clinical trials, analysing different data, and ensuring compliance with client requirements. These roles deepened my understanding of the scientific, healthcare, and pharmaceutical landscapes as well as improved my managerial and interpersonal skills.

Besides, my master's thesis at HAN University of Applied Sciences provided me with valuable experience in analysing the added value of home telemonitoring technology, which was done via the HTA framework presented onto the Quadruple aim, and included working with elderly patients and medical professionals. Moreover, it gave me experience of conducting some parts of the thesis in Dutch, which further fuelled me to actively learn the language. Furthermore, during my SMI track, I worked on real-world projects such as "HTA of a Medical Guidance App for International Students in the NL" and "A Shared Ownership Model of the Green Corridor." All these experiences greatly enriched my understanding of stakeholder collaboration and honed my skills in presenting and engaging audiences effectively.

In summary, my strong motivation for connecting science and society, combined with my comprehensive education and diverse professional experiences, positions me as an invaluable asset for Synthon.

Thank you for considering my application. Please feel free to reach out if you have any questions.

Warm regards,
Varvara Lazarenko
