

Dear Capgemini Invent,

My name is Varvara Lazarenko, and I would like to express my interest in applying for the position of Junior Consultant Future of Technology.

From the moment I discovered this position, I felt it aligned perfectly with my passions, career aspirations and experience. I am a recent graduate of the Medical Biology master's program with a specialization in Science, Management & Innovation (SMI) from Radboud University. I am committed to improving science, healthcare and education systems through modern digital technology and innovation. That is why I am genuinely thrilled about the opportunity to advise Capgemini clients on digital strategy and transformations and deliver practical solutions for their development.

My academic background equips me with a solid foundation for this role. Having finished a bachelor's in Biology and a master's in Medical Biology, I gained extensive knowledge in the field and developed a critical understanding of different medical technologies, digital innovations, and interdisciplinary challenges. During the SMI track in the second year of my master's, I gained valuable insights into digital healthcare, health technology assessment (HTA), market research, business models, value propositions, and health economics. Due to this, I have a clear understanding of how technology can drive business success. Additionally, during my studies I frequently volunteered for mentoring the first-year students and later organized volleyball tournaments on campus, which has reinforced my passion to help people and enhanced my ability to communicate effectively.

My professional experience will also be an asset for this position. As a Junior Research Assistant at the Faculty of Biology and an assistant at a Contract Research Organization, I gained substantial experience in writing academic papers and reports, developing clinical documentation, analysing different data, and ensuring compliance with client requirements. These roles significantly deepened my understanding of the scientific and industrial fields as well as improved my managerial and interpersonal skills.

Besides, my master's thesis at HAN University of Applied Sciences provided me with valuable experience in analysing the added value of home telemonitoring technology, which was done via the HTA framework presented onto the Quadruple aim, and included working with elderly patients and medical professionals. Moreover, it gave me experience of conducting some parts of the thesis in Dutch, which further fuelled me to actively learn the language. Furthermore, during my SMI track, I worked on real-world projects such as "HTA of a Medical Guidance App for International Students in the NL" and "A Shared Ownership Model of the Green Corridor." All these experiences greatly enriched my understanding of stakeholder collaboration and honed my skills in presenting and engaging audiences effectively.

In summary, my strong motivation for providing solutions in modern technology, combined with my comprehensive education and diverse professional experiences, positions me as a strong candidate for the role of Junior Consultant Future of Technology.

Thank you for considering my application. Please feel free to reach out if you have any questions.

Warm regards,
Varvara Lazarenko
